

EASY LEVEL

1. Pivot table helps to quickly sort, group and total stuff without doing the mate yourself. we can drag things around to see data from differnet angles. It likes a smart summary tool that shows us the important info without digging the through a huge spreadsheet.

2. Create a PivotTable to show Total Sales by Region.

Date	Region	Product	Sales	Quantity
1/1/2024 0:00	West	Mangoes	456	93

MEDIUM LEVEL

4. Explain the difference between Sorting and Filtering with an example from this dataset.

SORTING:-Sorting means arranging the rows in your table in a certain order for example -smallest to biggestst, A-Z, to oldest.

FILTERING:- Filtering means showing only the rows that match the rule and hiding the rest. It does not arrange the hides those rows which you don't want to see right now.

5. Create a PivotChart showing Monthly Sales Trend.

Row Labels	Sum of Sales
Jan	1281
Feb	615
Mar	958
Apr	1155
May	1286
Jun	1117
Grand Total	6412

6. Use a Slicer to filter data by Product and observe changes in sales.
